POTTSTOWN DIVISION

Since 2021, the sales and estimating teams of H&K Group, Inc.'s (H&K's) Pottstown Division have been diligently working through the value engineering process for the Pottstown Pike distribution facility, located at the Downingtown entrance of the Pennsylvania Turnpike in Uwchlan Township, PA. Starting from a small set of plans, the Pottstown Division was awarded the project in July of 2023.

The project consists of three (3) warehouses of different sizes: 700,000 SF, 300,000 SF, and 1,100,000 SF, as well as improvements to Uwchlan Township's Happy Days Park and adjoining Sheree Blvd. The Pottstown Division team accelerated their force to perform the work, which consisted of the following: installing and maintaining 23,527 LF of erosion and sediment (E&S) controls, performing six (6) acres of miscellaneous clearing, and establishing 10 temporary sediment traps. After this work was completed, H&K stripped 189,936 CY of topsoil and moved 869,564 CY of soil to turn over the building pads. Once the building pads were handed over to the concrete contractor, we proceeded with one underground StormTrap basin, 12,345 LF of storm sewer, 2,673 LF of off-site and on-site sanitary sewer, and 13,513 LF of off-site and on-site water main. This also included 24,350 LF of curbing, 19,238 SF of concrete flatwork and 19,589 SF of split face retaining wall. The project was finished out with 53,582 SY of heavy duty and light duty paving. The Pottstown Division also performed site clean-up with 60,514 CY of topsoil being respread.

The Pottstown Division team maintained an open dialogue with the general contractor for the entire duration of the project, and we were able to prevent potential obstacles while maintaining the GC's aggressive schedule. H&K has developed an amazing relationship with the general contractor and intends to perform many more projects in collaboration with them.

Over the last few months, H&K Group, Inc.'s (H&K's) Lehigh Valley Division has been performing work at Lehigh Valley International Airport (ABE). Taxiway A work includes milling, paving and fine grading. As increased demand has been placed on the airfield, these necessary upgrades were needed.

MAINTENANCE SPOTLIGHT

H&K Group, Inc. (H&K) recently acquired a Caterpillar 352 UHD (Ultra High Demolition) excavator. The 352 UHD is unique in its ability to swap booms out within a half hour. A long boom and stick setup, measuring 90ft without a tool, enables the operator to work on taller structures and has the capacity to hold an 8,000lb tool. The smaller boom, measuring in at 29ft without a tool, allows the operator to work on smaller structures, process material and work on the ground. The machine was delivered to our Cherry Hill demolition project, where it was assembled and put to work shortly after.

H&K Group, Inc.'s (H&K's) Structures Division recently acquired a Liebherr LRT1150 crawler crane. With a 170 ton load capacity, the crane is a welcome addition to the fleet. The machine was sent to H&K's P3 1-78 Lenhartsville, PA project, where it assisted in setting beams.

EVENT SPOTLIGHT

On August 7th, H&K Group, Inc. hosted 24 interns for the 2025 Transportation Quality Initiative (TQI) Shared Intern Program. Interns from PennDOT, TPD, STV, JMT, PA Turnpike and H&K were treated to a continental breakfast at H&K's Corporate HQ in Skippack, PA, followed by facility tours of Atlantic American Precast (AAP), Douglassville Quarry, Rahns Concrete - South Reading, and South Reading Asphalt. At Atlantic American Precast, the interns were shown the step-by-step process that makes precast concrete sections of wall and storm trap. At Douglassville Quarry, which shares property with AAP, the interns were treated to a live-to-plant drone flight of the entire quarry, from the pit to the plant. Once they arrived at South Reading, the interns were shown the concrete batch plant and the assembly line on the property. While at the blacktop plant, the interns got to watch a dump truck get loaded with asphalt and saw ready-mix concrete trucks running around the Rahns Concrete plant.

Once the interns executed back at H&K HQ, event was held alongside discussion of the day's events with H&K executives. An ice breaker lunch was also held, in which interns were broken up into groups to build a bridge out of Legos under a set of specifications and time constraints. Each group was then presented their bridge and debriefed on lessons learned. Once the ice breaker was complete, third generation ownership helped the interns learn our company's history, and what H&K is all about, followed by closing remarks and a short survey.
