H&K, INC. PLACES NEW, HIGH-TECH EQUIPMENT INTO SERVICE

Philadelphia, PA - On September 20th, 2021, Haines & Kibblehouse, Inc. (H&K, Inc.) made history by performing the first in-house concrete slipform pour on the I-95 project in Philadelphia, PA. Three new machines, made by GOMACO, were acquired by H&K Group, Inc. (H&K) and placed into service on this high-profile project. These machines consist of the RTP-500 rubber-tracked placer, the GP3 slipform paver and the T/C-600 texture/cure machine. This new and state-of-the-art equipment will allow H&K, Inc. to become more competitive in the construction and reconstruction of the heavy highway/transportation sectors.

The I-95 project consists of the reconstruction of SR 95 and SR 100 (Tacony Street) which is approximately 2.9 miles in length. The scope of work also calls for replacement of the SR 95 bridge over Van Kirk Street, the replacement of the SR 95 bridge over Comly Street, construction of five (5) retaining walls, storm sewer outfall replacement in Levick Street, and other miscellaneous construction, as indicated on the approved drawings included in the bid package for State Route 95, Section BS1 in the City of Philadelphia and Philadelphia County.

[Haines & Kibblehouse, Inc.](#) provides [heavy civil contracting and construction services](#) to the broader Philadelphia Metropolitan area and is celebrating over 50 years of business excellence.
